Beasley,Andrew D. Somerville,2023-06-23 This edited volume compiles a series of chapters written by experts of isotopic analysis in order to highlight the utility of various isotope systems in the reconstruction of past human behaviors Rather than grouping contributions by specific isotopes or analytical techniques as many isotope review articles are arranged the volume organizes chapters by broadly defined themes of archaeological research These include paleodiet and life histories human animal interactions and migration and mobility In this sense the book is arranged with the intent of being as much question based as method based Chapters under these themes provide background information on the principles of the techniques and on the theoretical underpinnings of the research yet they are written with the non specialist in mind and attempt to convey these ideas clearly and succinctly In addition to the case studies and reviews three chapters provide greater context to the field of isotopic archaeology discussing its history basic principles and future potential The volume aims to serve as a reference source for students and practicing archaeologists seeking to apply isotopic studies to their own research projects or to act as a reader for courses in archaeological science Chapter 6 is available open access under a Creative Commons Attribution 4 0 International License via link [springer.com](https://www.springer.com) **Hurricanes** Paul V. Kislow,2008 A hurricane is a tropical storm with winds that have reached a constant speed of 74 miles per hour or more Hurricane winds blow in a large spiral around a relative calm centre known as the eye The eye is generally 20 to 30 miles wide and the storm may extend outward 400 miles As a hurricane approaches the skies will begin to darken and winds will grow in strength As a hurricane nears land it can bring torrential rains high winds and storm surges A single hurricane can last for more than 2 weeks over open waters and can run a path across the entire length of the eastern seaboard August and September are peak months during the hurricane season that lasts from 1 June to 30 November This book presents the facts and history of hurricanes *Advanced Technologies, Embedded and Multimedia for Human-centric Computing* Yueh-Min Huang,Han-Chieh Chao,Der-Jiunn Deng,James J. (Jong Hyuk) Park,2013-11-13 The theme of HumanCom and EMC is focused on the various aspects of human centric computing for advances in computer science and its applications embedded and multimedia computing and provides an opportunity for academic and industry professionals to discuss the latest issues and progress in the area of human centric computing And the theme of EMC Advanced in Embedded and Multimedia Computing is focused on the various aspects of embedded system smart grid cloud and multimedia computing and it provides an opportunity for academic industry professionals to discuss the

**Salinity Tolerance: From Model or Wild Plants to Adapted Crops** Quan-Sheng Qiu,Zhiguang Zhao,Vanessa Jane Melino,Ute Roessner,Zhi Qi,Crystal Sweetman,2022-09-01 **The Encapsulation Phenomenon** Yan Voloshin,Irina Belaya,Roland Krämer,2016-04-27 This fundamental book presents the most comprehensive summary of the current state of the art in the chemistry of cage compounds It introduces different ways of how ions and molecules can be encapsulated by three dimensional caging ligands to form molecular and polymeric species covalent supramolecular and coordination capsules The authors introduce their classification reactivity and selected practical applications Because encapsulation can isolate caged ions and molecules from external factors the encapsulated species can exhibit unique physical and chemical properties The resulting specific reactivity and selectivity can open up a range of applications including chemical separation recognition chiral separation catalysis applications as sensors or probes as molecular or supramolecular devices or molecular carriers cargo A particularly strong emphasis in this book is on the summary and review of the synthesis of various types of

cage compounds Readers will find over 850 literature references summarized and clearly represented in over 600 schemes and illustrations The book is structured by the types of caging ligands covalent supramolecular or coordination capsules The authors further arranged the chapters by ligand classes and types of encapsulated species neutral molecules anions or cations Readers will hence find an exhaustive reference resource and summary of the current state of research into encapsulated species nowadays almost a separated realm of modern chemistry

*Computation of Language* Roland Hausser, 2012-12-06 The study of linguistics has been forever changed by the advent of the computer Not only does the machine permit the processing of enormous quantities of text thereby securing a better empirical foundation for conclusions but also since it is a modelling device the machine allows the implementation of theories of grammar and other kinds of language processing Models can have very unexpected properties both good and bad and it is only through extensive tests that the value of a model can be properly assessed The computer revolution has been going on for many years and its importance for linguistics was recognized early on but the more recent spread of personal workstations has made it a reality that can no longer be ignored by anyone in the subject The present essay in particular could never have been written without the aid of the computer I know personally from conversations and consultations with the author over many months how the book has changed If he did not have at his command a powerful typesetting program he would not have been able to see how his writing looked and exactly how it had to be revised and amplified Even more significant for the evolution of the linguistic theory is the easy testing of examples made possible by the implementation of the parser and the computer held lexicon Indeed the rule set and lexicon grew substantially after the successes of the early implementations created the desire to incorporate more linguistic phenomena

Mechanisms for Delivering Hydrogen from Ammonia-borane Via Protons, Hydrides, and a Dative Bond Paul Martin Zimmerman, 2010 The hydrogen economy is a hypothetical replacement for the world's reliance on fossil fuels Concerns over carbon dioxide and global warming have driven research into creating reliable systems to utilize hydrogen as a vehicular fuel Because molecular hydrogen is a gas storage at practical densities is a major problem for its utilization One highly promising material for hydrogen storage is ammonia borane AB or  $\text{NH}_3\text{BH}_3$  AB has a high weight percent hydrogen 20% and its protic N-H and hydridic B-H hydrogens appear ripe for dehydrogenation However reversible release of  $\text{H}_2$  from

AB requires fine control over dehydrogenation mechanisms Using ab initio simulations we elucidate the fundamental mechanisms involved in removing hydrogen from AB Herein we investigate mechanisms for the dehydrogenation of AB by homogeneous catalysis and thermolysis We show that unexpected active catalysts and experimentally unobservable intermediates are key aspects of this chemistry Furthermore the effects of solvent and dynamics are vital to understanding product distributions Finally two hydrogen transfer is highlighted as a fascinating chemistry involving the simultaneous transfer of protic and hydridic hydrogen

**Fundamentals of Algebraic Specification 2** Hartmut Ehrig, Bernd Mahr, 1989-12-28 Since the early seventies concepts of specification have become central in the whole area of computer science Especially algebraic specification techniques for abstract data types and software systems have gained considerable importance in recent years They have not only played a central role in the theory of data type specification but meanwhile have had a remarkable influence on programming language design system architectures and software tools and environments The fundamentals of algebraic specification lay a basis for teaching research and development in all those fields of computer science where algebraic techniques are the

subject or are used with advantage on a conceptual level Such a basis however we do not regard to be a synopsis of all the different approaches and achievements but rather a consistently developed theory Such a theory should mainly emphasize elaboration of basic concepts from one point of view and in a rigorous way reach the state of the art in the field We understand fundamentals in this context as 1 Fundamentals in the sense of a carefully motivated introduction to algebraic specification which is understandable for computer scientists and mathematicians 2 Fundamentals in the sense of mathematical theories which are the basis for precise definitions constructions results and correctness proofs 3 Fundamentals in the sense of concepts from computer science which are introduced on a conceptual level and formalized in mathematical terms
